

Walkway & Stairways

Permian Tank walkways and stairways are available as complete units for specific applications or as individual parts. They are constructed of pre-cut, pre-punched, all steel material. The bridge type method of bracing insures rigid and durable structures. The flanged walkway panels and stairway treads are punched by blister type dies, which provide a safe non-skid walking surface. All joints in the handrails and access openings are carefully protected with smooth flanged gussets. Walkways and stairways are built to API specifications. Permian Tank walkways and stairways are offered with galvanized, bare metal or painted to your color preference.
